Prepared as a bilingual investor draft. English section first, full Chinese version follows each section.

1. Executive Summary

ComicLearn is an AI-powered curriculum-to-comic platform for K-12 education. The company helps teachers, curriculum designers, schools, and education programs convert textbooks, class notes, lesson plans, and learning guides into visual, story-driven comic lessons that students are more willing to read and more likely to remember.

The core thesis is simple: the next generation of learning products will not compete with entertainment by becoming less academic. They will make rigorous academic content easier to enter through story, original IP, visual memory, emotional safety, and teacher-controlled AI workflows.

ComicLearn is building two complementary product lines: K-12 Creative Textbooks, a proprietary story universe with original characters and subject-based academies; and a Personalized AI Platform, a studio where teachers and students can generate customized comic books from real learning materials.

The company is currently at the concept-to-demo stage. The near-term goal is to build original IP, produce demo courses, validate the teacher workflow, and recruit the early technical, design, and curriculum team needed to turn the prototype into a repeatable product.

1. 执行摘要

ComicLearn 是一个面向 K-12 教育的 AI 课程漫画化平台。公司帮助教师、课程设计者、学校和教育项目把教材、课堂笔记、lesson plan 和学习资料转化为视觉化、故事化的漫画课程，让学生更愿意阅读，也更容易记住知识。

ComicLearn 的核心判断很直接：下一代学习产品不应该通过降低学术性来和娱乐内容竞争，而应该通过故事、原创 IP、视觉记忆、情绪安全感和教师可控的 AI 工作流，让严谨的学术内容更容易被学生进入。

ComicLearn 正在建设两条互补的产品线：第一是 K-12 Creative Textbooks，即基于原创故事宇宙、原创角色和学科院系的漫画课程体系；第二是 Personalized AI Platform，即让教师和学生可以把真实学习材料生成个性化漫画书的创作平台。

公司当前处于 concept-to-demo 阶段。近期目标是建立原创 IP、制作 demo 课程、验证教师端工作流，并招募早期技术、设计和课程团队，把原型推进为可重复交付的产品。

2. Problem and Why Now

Traditional education is facing a negative engagement loop. Teachers are under pressure, classrooms become more process-driven, students lose curiosity in abstract subjects, and teachers often lack the

tools to trace the true source of learning gaps. This pattern is especially visible in STEM and other concept-heavy subjects.

Gen Alpha is growing up in an environment shaped by short video, streaming media, games, and AI-native content. Students are not simply distracted; their expectations for information design have changed. Static worksheets and long textbook passages often fail to create enough context, identity, conflict, or emotional pull.

ComicLearn responds to this timing by turning learning into visual narrative. Comics can make abstract theory concrete, give students characters to follow, create safe emotional distance from difficult concepts, and help teachers communicate meaning without giving up academic rigor.

The opportunity is not to replace teachers. The opportunity is to give teachers a new production system: one that can transform curriculum into visual lessons quickly, adapt to student context, and remain reviewable before it reaches the classroom.

2. 问题与时机

传统教育正在面临一个负向的参与循环。教师承受压力，课堂越来越流程化，学生在抽象学科中逐渐失去好奇心，而教师又缺少工具去追踪真正的学习断点。这个问题在 STEM 和其他概念密集型学科中尤其明显。

Gen Alpha 成长在短视频、流媒体、游戏和 AI 原生内容共同塑造的环境中。学生并不是简单地“注意力差”，而是对信息设计的期待已经发生变化。静态练习册和长篇教材文字，往往很难提供足够的语境、身份感、冲突和情绪牵引。

ComicLearn 对这一时机的回应，是把学习转化为视觉叙事。漫画可以让抽象理论变得具体，让学生跟随角色进入知识，让困难概念和学生之间产生安全的情绪距离，也帮助教师在不牺牲学术严谨性的前提下传递意义。

机会并不是替代教师，而是给教师一个新的内容生产系统：一个可以快速把课程转化为视觉化 lesson、适配学生语境，并在进入课堂前由教师审核的系统。

3. Product

ComicLearn has two linked products. The first is K-12 Creative Textbooks: proprietary comic-based course series organized around a story universe, subject academies, original character IP, and companion teacher pets. The first target age band is 8-12, with expansion paths into K-8, AP, high school, and enrichment settings.

The second product is the Personalized AI Platform. Teachers and students upload class notes, textbook pages, learning guides, or lesson plans; choose the IP world, storyline, tone, and difficulty; then generate scripts, storyboards, comic pages, worksheets, and learning checks.

The product must be teacher-in-the-loop. AI generation is useful only if educators can audit accuracy, adjust difficulty, revise dialogue, and export classroom-ready materials. ComicLearn is therefore not just a comic generator; it is a curriculum-aware production workflow.

Prototype materials have used Doraemon only as an experimental sample IP for internal content and model testing. The commercial product direction is proprietary original IP, including a story universe, character bible, style guide, reference library, and consistency workflow.

3. 产品

ComicLearn 有两条相互连接的产品线。第一条是 **K-12 Creative Textbooks**：基于原创故事宇宙、学科院系、原创角色 IP 和陪伴式教师宠物 IP 的漫画课程系列。第一阶段目标年龄段是 8-12 岁，之后可以扩展到 K-8、AP、高中和课外拓展场景。

第二条产品线是 **Personalized AI Platform**。教师和学生上传课堂笔记、教材页面、学习指南或 lesson plan，选择 IP 世界观、故事线、语气和难度，然后生成脚本、分镜、漫画页面、worksheet 和学习检查点。

这个产品必须坚持 **teacher-in-the-loop**。AI 生成只有在教师能够审核准确性、调整难度、修改对白并导出课堂可用材料时，才真正有价值。因此 ComicLearn 不只是一个漫画生成器，而是一个理解课程的内容生产 workflow。

原型材料中曾经只把 Doraemon 作为内部内容和模型测试的实验样例 IP。正式商业化产品方向是自有原创 IP，包括故事宇宙、character bible、style guide、reference library 和一致性生成流程。

4. Target Customers and Use Cases

ComicLearn is primarily a B2B education product. The initial buyers are school districts, education corps and nonprofit programs, after-school and enrichment providers, curriculum teams, publishers, and learning-content agencies. The direct users are teachers, curriculum designers, and students.

For teachers, the main use case is turning abstract units into visual pre-learning, classroom explanation, review, or intervention material. For curriculum designers, the use case is building reusable visual lesson assets across grade levels and subjects. For schools and districts, the value is higher engagement, differentiated instruction, and a more human learning experience.

The strongest early wedge is likely a pilot-based sales motion. ComicLearn can start with specific units, subjects, or enrichment programs where visual learning has obvious value, then expand into annual subscriptions, district contracts, and curriculum partnerships.

4. 目标客户与使用场景

ComicLearn 首先是一个 To B 教育产品。早期购买方包括 school districts、education corps 和非营利教育项目、课后与拓展教育机构、课程团队、出版社以及学习内容 agency。直接使用者包括教师、课程设计者和学生。

对教师来说，核心场景是把抽象单元转化为预习、课堂讲解、复习或补救教学的视觉化材料。对课程设计者来说，核心场景是跨年级、跨学科建设可复用的视觉化 lesson 资产。对学校 and 学区来说，价值在于提高参与度、支持差异化教学，并创造更有人味的学习体验。

最强的早期切入点可能是 pilot-based sales motion。ComicLearn 可以从特定单元、特定学科或拓展教育项目开始，在视觉学习价值明显的场景中验证效果，再扩展到年度订阅、学区合同和课程合作。

Customer Map / 客户地图

Customer / 客户	Need and Use Case / 需求与场景
School districts 学区	Engagement, differentiated instruction, scalable visual curriculum assets 提高参与度、支持差异化教学、建设可规模化视觉课程资产
Education nonprofits 教育非营利组织	Mission-aligned pilots for underserved students and enrichment programs 服务弱势学生和拓展项目的 mission-aligned pilot
Teachers and curriculum teams 教师与课程团队	Convert real lesson plans into reviewable comic lessons 把真实 lesson plan 转化为可审核漫画 lesson
Publishers and agencies 出版社与内容机构	Create visual learning content faster and at lower production cost 更快、更低成本地生产视觉化学习内容

5. Market Opportunity and Competition

The broader market is moving toward visual, interactive, and AI-assisted learning. Schools and education programs are looking for ways to personalize instruction, improve engagement, support different learning styles, and make difficult subjects less intimidating.

Existing alternatives each solve part of the problem. Beast Academy uses comic-style math content, Khan Academy provides free K-12 content and AI tutoring, Epic distributes children's digital reading content, and CreatorUp offers professional education video and animation production.

ComicLearn's difference is workflow ownership. The goal is not a fixed content library or a professional production service. The goal is to let frontline educators convert their own curriculum into editable, iterative, IP-driven comic lessons.

5. 市场机会与竞争格局

更大的市场趋势正在转向视觉化、互动化和 AI 辅助学习。学校和教育项目都在寻找方法去实现个性化教学、提高学生参与度、支持不同学习方式，并让困难学科不再那么有距离感。

现有替代方案各自解决了问题的一部分。Beast Academy 提供漫画化数学内容，Khan Academy 提供免费的 K-12 内容和 AI tutor，Epic 做儿童数字阅读内容分发，CreatorUp 提供教育视频和动画制作服务。

ComicLearn 的差异在于拥有工作流。目标不是做一个固定内容库，也不是做一个专业制作服务，而是让一线教育者把自己的课程即时转化为可编辑、可迭代、由原创 IP 驱动的漫画 lesson。

Competitive Landscape / 竞争格局

Player / 竞品	What They Do / 现有方案	ComicLearn Difference / ComicLearn 差异
Beast Academy	Comic-style math curriculum 漫画化数学课程	Strong fixed content, but not a teacher-controlled generation workflow 固定内容优秀，但不是教师可控生成工作流
Khan Academy	Free K-12 content and AI tutor 免费 K-12 内容和 AI tutor	Focuses on tutoring and practice; ComicLearn focuses on visual narrative production 更偏辅导和练习；ComicLearn 聚焦视觉叙事生产
Epic	Children's digital reading library 儿童数字阅读内容库	Strong reading distribution, but not curriculum-to-comic creation 阅读分发强，但不解决课程即时漫画化
CreatorUp	Education video / animation service 教育视频与动画服务	Professional service model; ComicLearn aims for educator self-service and iteration 专业服务模式；ComicLearn 追求教育者自助生成和迭代

6. Business Model and Go-to-Market

ComicLearn can monetize through pilots, annual school subscriptions, district and nonprofit contracts, publisher or agency projects, and eventually premium content/IP packages. The first commercial goal should be proving that educators will pay for faster, higher-quality visual lesson production.

The go-to-market strategy should begin with founder-led pilots. The company can target teachers, curriculum designers, enrichment programs, and education nonprofits that already feel the pain of engagement and differentiated instruction. Each pilot should generate product feedback, classroom artifacts, testimonial evidence, and reusable content samples.

Once the workflow is validated, ComicLearn can move from custom pilots to repeatable packages: subject-specific demo units, grade-band bundles, annual platform access, and content partnerships with publishers or agencies.

6. 商业模式与市场进入策略

ComicLearn 可以通过 pilot、学校年度订阅、学区和非营利项目合同、出版社或 agency 项目，以及未来的 premium content/IP package 实现商业化。第一阶段商业目标应该是证明教育者愿意为更快、更高质量的视觉化 lesson 生产付费。

市场进入策略应该从 founder-led pilots 开始。公司可以优先触达已经感受到参与度和差异化教学痛点的教师、课程设计者、拓展教育项目和教育非营利组织。每个 pilot 都应该产出产品反馈、课堂使用材料、testimonial evidence 和可复用内容样张。

当工作流得到验证之后，ComicLearn 可以从定制 pilot 过渡到可复制产品包：特定学科 demo unit、年级段 bundle、年度平台 access，以及与出版社或 agency 的内容合作。

Planning Pricing Assumptions / 定价假设

Model / 模式	Planning Price / 计划价格	Scope / 范围
Pilot package 试点包	RMB 35k-100k ~USD 5.2k-14.8k	Specific subject/unit pilot, classroom samples, feedback loop 特定学科或单元试点、课堂样张、反馈闭环
School subscription 学校年度订阅	RMB 55k-170k/year ~USD 8.1k-25.1k/year	Teacher access, generation credits, reusable lesson library 教师 access、生成额度、可复用 lesson library
District / nonprofit contract 学区/非营利合同	RMB 340k-1.02M/year ~USD 50.2k-150.6k/year	Multi-school pilots, curriculum partnership, implementation support 多学校试点、课程合作、实施支持

Model / 模式	Planning Price / 计划价格	Scope / 范围
Publisher / agency project 出版社/agency 项目	RMB 135k-510k/project ~USD 19.9k-75.3k	Custom visual learning units or IP-based course assets 定制视觉课程单元或 IP 化课程资产

7. Roadmap and Current Stage

ComicLearn is currently moving from concept to demo. The near-term product focus is the core workflow: upload learning material, identify subject and grade goals, select IP/storyline, generate comic scripts and pages, enable teacher review, and export classroom-ready materials.

The content focus is to create the first demo courses in math, English, business, and physics. The IP focus is to build original characters, a story universe, faculty-specific costumes, character rules, and a visual style system that can remain consistent across multiple lessons.

The company should use the next 90 days to produce visible artifacts, document the building process, run educator interviews, and recruit early collaborators. The next 12-18 months should turn those artifacts into pilots, paid experiments, and a repeatable generation platform.

7. 路线图与当前阶段

ComicLearn 当前正在从 concept 推进到 demo。近期产品重点是核心 workflow：上传学习材料、识别学科和年级目标、选择 IP 和故事线、生成漫画脚本和页面、支持教师审核，并导出课堂可用材料。

内容重点是制作第一批 demo 课程，优先覆盖数学、英语、商业和物理。IP 重点是建立原创角色、故事宇宙、院系服饰、角色规则和视觉风格系统，让角色和世界观能够在多节 lesson 中保持一致。

公司应该在未来 90 天内产出可见 artifact，记录 build-in-public 过程，开展教育者访谈，并招募早期共创者。未来 12-18 个月的重点，是把这些 artifact 转化为 pilot、付费实验和可重复生成的平台。

8. Team and Hiring Needs

ComicLearn is founded by Andy Wang, a Duke University junior studying Financial Economics and Secondary Math Education. Andy has taught mathematics in U.S. middle and high school settings, created innovative education activities, and worked on research connected to school choice, mechanism design, STEM identity, and education.

The early team should combine education, AI product development, visual IP creation, and curriculum design. ComicLearn needs people who believe that children deserve classrooms beyond grades and that AI can make education more visual, personal, and humane.

The immediate hiring priorities are a software developer or generative content engineer, an IP designer, and K-12 curriculum designers. Advisors in AI education, learning science, school adoption, child development, and commercialization would also be valuable.

8. 团队与招聘需求

ComicLearn 由 Andy Wang 创立。Andy 是 Duke University 的大三学生，主修 Financial Economics 和 Secondary Math Education。他曾在美国初高中数学教学场景中工作，设计过创新教育活动，并参与过与 school choice、mechanism design、STEM identity 和教育相关的研究。

早期团队需要结合教育、AI 产品开发、视觉 IP 创作和课程设计能力。ComicLearn 需要相信孩子值得拥有分数之外课堂的人，也需要相信 AI 可以让教育变得更视觉化、更个性化、更有人性的共创者。

当前最重要的招聘方向包括 software developer 或 generative content engineer、IP designer，以及 K-12 curriculum designers。同时，AI education、learning science、school adoption、child development 和 commercialization 方向的 advisor 也会非常有价值。

Early Team Priorities / 早期团队优先级

Role / 角色	Contribution / 贡献
Software Developer / Generative Content Engineer 软件工程师/生成式内容工程师	Build the teacher-facing web product, generation pipeline, multimodal workflow, visual QA, and model adaptation system. 搭建教师端 Web 产品、生成管线、多模态工作流、视觉 QA 和模型适配系统。
IP Designer IP 设计师	Create proprietary characters, pet-teacher system, story universe, character bible, style guide, facial/action sheets, and comic visual language. 设计原创角色、宠物教师系统、故事宇宙、character bible、style guide、表情动作库和漫画视觉语言。
K-12 Curriculum Designers K-12 课程设计者	Translate standards, class materials, misconceptions, and lesson objectives into story arcs and age-appropriate learning sequences. 把标准、课堂材料、常见误区和教学目标转化为故事线和适龄学习序列。

9. Fundraising Ask, Use of Funds, and Milestones

ComicLearn is raising RMB 1,000,000, equivalent to approximately USD 147,620 at the locked planning exchange rate of RMB 1 = USD 0.14762. The round offers 10% equity, implying a post-money valuation of RMB 10,000,000 and a pre-money valuation of RMB 9,000,000.

The purpose of this capital is to reach a credible seed-stage proof point: a working teacher-facing product demo, original IP and content assets, first pilot partners, classroom-ready sample lessons, and evidence that teachers or institutions will pay for faster visual curriculum production.

The round is intentionally sized for focused validation, not large-scale expansion. The company should use the funding to reduce the biggest early risks: product feasibility, IP consistency, curriculum accuracy, teacher workflow usability, and paid demand.

9. 融资需求、资金用途与里程碑

ComicLearn 计划融资人民币 1,000,000 元，按照锁定的计划汇率 RMB 1 = USD 0.14762，约合 USD 147,620。本轮出让 10% 股份，对应投后估值人民币 10,000,000 元，投前估值人民币 9,000,000 元。

这笔资金的目标，是帮助公司达到可信的 **seed-stage proof point**：完成教师端产品 **demo**，建立原创 IP 和内容资产，获得第一批 **pilot partner**，产出课堂可用的样例 **lesson**，并证明教师或机构愿意为更快的视觉化课程生产付费。

本轮融资规模的设计目标是聚焦验证，而不是大规模扩张。公司应该用资金降低最关键的早期风险：产品可行性、IP 一致性、课程准确性、教师 workflow 可用性和付费需求。

Use of Funds / 资金用途

Category / 类别	Share / 比例	Amount / 金额	Purpose / 用途
Product engineering + AI infrastructure 产品工程与 AI 基础设施	40%	RMB 400,000 / ~USD 59,048	Teacher studio, generation pipeline, model workflow, QA tools 教师端 studio、生成管线、模型 workflow、QA 工具
Curriculum, IP, and content production 课程、IP 与内容生产	25%	RMB 250,000 / ~USD 36,905	Original IP, story universe, demo courses, curriculum design 原创 IP、故事宇宙、demo 课程、课程设计
Pilots, partnerships, sales, and community 试点、合作、销售与社群	20%	RMB 200,000 / ~USD 29,524	Educator interviews, pilot support, social content, partnerships 教育者访谈、试点支持、社交内容、合作拓展
Operations, legal, admin 运营、法律与行政	10%	RMB 100,000 / ~USD 14,762	Incorporation, contracts, accounting, tooling 注册、合同、会计、工具
Contingency 预备金	5%	RMB 50,000 / ~USD 7,381	Buffer for compute, pilot iteration, and unexpected costs 算力、试点迭代和不可预期成本缓冲

18-Month Milestones / 18 个月里程碑

Period / 阶段	Milestone / 里程碑
0-3 months 0-3 个月	Build original IP direction, demo lesson samples, and teacher workflow prototype. 建立原创 IP 方向、demo lesson 样张和教师端 workflow 原型。
3-6 months 3-6 个月	Run educator interviews, produce first subject demos, and recruit core technical/design collaborators. 开展教育者访谈、制作第一批学科 demo、招募核心技术和设计共创者。
6-12 months 6-12 个月	Launch paid or structured pilots with schools, nonprofits, or enrichment programs. 与学校、非营利组织或拓展教育项目启动付费或结构化试点。
12-18 months 12-18 个月	Convert pilots into repeatable packages, refine pricing, and prepare for a larger seed round. 把试点转化为可复制产品包，优化定价，并准备更大规模 seed round。
